

Collapsible Insulated Portable Storage Carrier With Security Flap

Abstract: A carrier (10A and 10B) made of a flexible, rigid insulating material consisting of a longitudinal flap (16) with integral lobe (18) to enable the carrier to be secured onto the bed (30) of a pickup truck by trapping said lobe within the gap (34) between the pickup truck bed and truck tailgate (28). The top panel (42) and bottom panel (44) each consisting of zipper pulls (22A, 22B, 22C, 22D) and said panel attachment onto common back panel (12) to permit opening and closing and serving further purpose as to permit complete collapsing and folding of the carrier. The carrier actually consisting of two identical mirror image configured carriers for maximum consumption of space generated by the width and height of said truck bed, and distance between said pickup truck tailgate and truck tubular-bed-extender (36).
